	Two major issues related to storing program information in an OODB are sharing and clustering. The former is important since it prevents the database from consuming excessive disk space, while the latter is crucial, since it keeps clients running without thrashing. In our database, objects are shared across multiple programs' translation units, and are clustered by combining three techniques, namely, birth-order, death-order, and sharing-oriented clusterings. An initial experiment shows tha

	Computer-supported cooperative work (CSCW) is a new multi-disciplinary field with roots in many disciplines. Due to the area's youth and diversity, few specialized books or journals are available, and articles are scattered amongst diverse journals, proceedings and technical reports. Building a CSCW reference library is particularly demanding, for it is difficult for the new researcher to discover relevant documents. To aid this task, this article compiles, lists and annotates some of the curren

	Database systems were a solution to the problem of shared access to heterogeneous files created by multiple autonomous applications in a centralized environment. To make data usage easier, the files were replaced by a globally integrated database. To a large extent, the idea was successful, and many databases are now accessible through local and long-haul networks. Unavoidably, users now need shared access to multiple autonomous databases. The question is what the corresponding methodology	
8	Network planning with a performance-prediction tool	
	Stephen D. Post	

May 1999 International Journal of Network Management, Volume 9 Issue 3

Publisher: John Wiley & Sons, Inc.

A new type of tool facilitates network engineering by combining the speed and practicality of mathematical analysis with a graphic user interface that is customized for network modeling. Copyright © 1999 John Wiley & Sons, Ltd.

9 Astrolabe: A robust and scalable technology for distributed system monitoring,

management, and data mining

Robbert Van Renesse, Kenneth P. Birman, Werner Vogels May 2003 ACM Transactions on Computer Systems (TOCS), Volume 21 Issue 2

Publisher: ACM Press

Full text available: pdf(341.62 KB)

Additional Information: full citation, abstract, references, citings, index

Scalable management and self-organizational capabilities are emerging as central requirements for a generation of large-scale, highly dynamic, distributed applications. We have developed an entirely new distributed information management system called Astrolabe. Astrolabe collects large-scale system state, permitting rapid updates and providing on-the-fly attribute aggregation. This latter capability permits an application to locate a resource, and also offers a scalable way to track sys ...

10 Experiences with HyperBase: a hypertext database supporting collaborative work

Uffe Kock Wiil

December 1993 ACM SIGMOD Record, Volume 22 Issue 4

Publisher: ACM Press

Full text available: 🔂 pdf(762.76 KB) Additional Information: full citation, abstract, citings, index terms

This paper describes the architecture and experiences with a hyperbase (hypertext database). HyperBase is based on the client-server model and has been designed especially to support collaboration. HyperBase has been used in a number of (hypertext) applications in our lab and is currently being used in research projects around the world to provide database support to all kinds of applications. One application from our lab is a multiuser hypertext system for collaboration which deals with th ...

11 Education issues: Customizable distance learning: criteria for developing learning

objects and learning model templates

Dehua Yang, Qiutian Yang

August 2005 Proceedings of the 7th international conference on Electronic commerce ICEC '05

Publisher: ACM Press

Full text available: pdf(384.29 KB) Additional Information: full citation, abstract, references, index terms

An important issue of a customizable distance learning system is how to author learning objects, which are the basic resources or elements of learning materials. This paper puts forward a set of basic criteria for learning objects' authoring and learning model templates' generating, based on learners psychological and pedagogical principles regarding electronic learning materials, and the theories and techniques of customizable distance learning systems.

Keywords: customizable distance learning, learning object, learning object authoring

12 Session 3: Demonstrational customization of a shared whiteboard to support userdefined semantic relationships among objects

Du Li, Jason Patrao

September 2001 Proceedings of the 2001 International ACM SIGGROUP Conference on Supporting Group Work

Publisher: ACM Press

Full text available: pdf(381.33 KB) Additional Information: full citation, abstract, references, index terms

As a promising approach to end-user computing, programming by demonstration (PBD) techniques have been explored by many researchers in single-user applications. This paper investigates how PBD techniques can be used to support end-user customization of groupware tools. In collaborative applications, complex semantic relationships can emerge unanticipatedly among objects (participants, data artifacts, tools, devices, etc.) such as the hierarchical organization of participants, consistency mainten ...

13 Customization: optimizing compiler technology for SELF, a dynamically-typed object-

oriented programming language

C. Chambers, D. Ungar

June 1989 ACM SIGPLAN Notices, Proceedings of the ACM SIGPLAN 1989 Conference on Programming language design and implementation PLDI '89, Volume 24 Issue 7

Publisher: ACM Press

Full text available: pdf(1.87 MB)

Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index</u> terms

Dynamically-typed object-oriented languages please programmers, but their lack of static type information penalizes performance. Our new implementation techniques extract static type information from declaration-free programs. Our system compiles several copies of a given procedure, each customized for one receiver type, so that the type of the receiver is bound at compile time. The compiler predicts types that are statically unknown but likely, and inserts ...

14 Form management

D. Tsichritzis

July 1982 Communications of the ACM, Volume 25 Issue 7

Publisher: ACM Press

Full text available: pdf(2.78 MB)

Additional Information: full citation, abstract, references, citings, index terms

This paper consists of three interrelated parts. In the first part forms are intoduced as an abstraction and generalization of business paper forms. A set of facilities for the manipulation of forms and their contents is outlined. Forms can be created, stored, found, viewed in different media, mailed, and located by office workers. Data on forms can also be processed in a completely integrated way. The facilities are discussed both abstractly and in relation to a prototype ...

**Keywords**: database management, office modeling, office procedures

15 Customization of object request brokers by application specific policies Bo Nørregard Jørgensen, Eddy Truyen, Frank Matthijs, Wouter Joosen April 2000 IFIP/ACM International Conference on Distributed systems platforms Publisher: Springer-Verlag New York, Inc.

Full text available: pdf(160.32 KB) Additional Information: full citation, abstract, references, citings

This paper presents an architectural framework for customizing Object Request Broker (ORB) implementations to application-specific preferences for various non-functional requirements. ORB implementations are built by reusing a domain-specific componentbased architecture that offers support for one or more non-functional requirements. The domain-specific architecture provides the mechanism that allows the ORB to reconfigure its own implementation at run-time on the basis of application-specif ...

16 Cluster resource management: An integrated experimental environment for

distributed systems and networks

Brian White, Jay Lepreau, Leigh Stoller, Robert Ricci, Shashi Guruprasad, Mac Newbold, Mike Hibler, Chad Barb, Abhijeet Joglekar

December 2002 ACM SIGOPS Operating Systems Review, Volume 36 Issue SI

Publisher: ACM Press

Full text available: pdf(2.10 MB) Additional Information: full citation, abstract, references

Three experimental environments traditionally support network and distributed systems research: network emulators, network simulators, and live networks. The continued use of multiple approaches highlights both the value and inadequacy of each. Netbed, a descendant of Emulab, provides an experimentation facility that integrates these approaches, allowing researchers to configure and access networks composed of emulated, simulated, and wide-area nodes and links. Netbed's primary goals are ease ...

17 Customization and composition of distributed objects: middleware abstractions for

policy management

Mark Astley, Gul A. Agha

November 1998 ACM SIGSOFT Software Engineering Notes, Proceedings of the 6th ACM SIGSOFT international symposium on Foundations of software engineering SIGSOFT '98/FSE-6, Volume 23 Issue 6

Publisher: ACM Press

Additional Information: full citation, abstract, references, citings, index Full text available: pdf(931.52 KB) terms

Current middleware solutions such as CORBA and Java's RMI emphasize compositional design by separating functional aspects of a system (e.g. objects) from the mechanisms used for interaction (e.g. remote procedure call through stubs and skeletons). While this is an effective solution for handling distributed interactions, higher-level requirements such as heterogeneity, availability, and adaptability require policies for resource management as well as interaction. We describe the

18 Making PRIME usable

John Sören Pettersson, Simone Fischer-Hübner, Ninni Danielsson, Jenny Nilsson, Mike Bergmann, Sebastian Clauss, Thomas Kriegelstein, Henry Krasemann

July 2005 Proceedings of the 2005 symposium on Usable privacy and security SOUPS '05

Publisher: ACM Press

Full text available: pdf(2.39 MB) Additional Information: full citation, abstract, references, index terms

Privacy-enhanced Identity Management can enable users to retain and maintain informational self-determination in our networked society. This paper describes the usability research work that has been done within the first year of the European Union project on "Privacy and Identity Management for Europe" (PRIME). It primarily discusses and compares three alternative UI paradigms for privacy-enhanced Identity Management, and presents how important legal privacy principles derived from the European ...
